FOR IMMEDIATE RELEASE

First Installed VFD Compact Booster Package Combines 5% Power Savings With CloudStat® Monitoring

TOCCOA, GA —The 10-story Corporate One building, part of Enterprise Corporate Park in Shelton, CT, owned by R.D. Scinto, Inc., recently upgraded its existing duplex booster to an Aqua~FloPac® Booster Plumbing Package to serve the top five floors and rooftop cooling tower with domestic water. This new triplex Aqua~FloPac package features a compact footprint, simple retrofit installation, variable frequency drives (VFDs) and CloudStat® Remote Status Monitoring.

The CloudStat system enables the office park's HVAC manager to see what the pump package is doing from anywhere with internet access. From its cellular link to a remote service bureau, the CloudStat system sends operating data and history to any browser-enabled over the internet.

After several months of operating experience, the owners found that the Aqua~FloPac required at least 10% less electric power, reducing power charges by more than 5% and amounting to a payback of less than one year.

Patterson has produced a video and detailed case history information on the Corporate One Aqua~FloPac installation. For more information, go to <http://www.youtube.com/user/pattersonpumps> and http://pattersonpumps.com/aqua_flopac_booster_pkgs.html.
